Education

J.C. Bose University of Science and Technology (Faridabad)   **2020-2024**
Bachelor of Technology [B.Tech] in Computer Science & Engineering

Govt Boys Senior Secondary School (Delhi)   **2019-2020**
Senior Secondary (XII)   *Non-Medical (PCM)*

Work Experience

BytesBrick InfoSystems OPC Pvt Ltd(Technovatic Solutions)   **Nov 2024 – present**
Full Stack Developer

- Started as a Full-Stack Developer, currently focusing on frontend development, Gaining hands-on experience in building and maintaining web applications.
- I Contributed to projects like Rider Music Festival CMS (RedFM) and currently Leading portal and CMS development for Escorts Kubota Limited and SatyaHindi News CMS. and also worked on internal projects like Technovatic Solution (company website) and a SaaS model.

Projects

SatyaHindi News CMS

- This project create by using React js, Tailwind, Typescript, Ant Design, node js Express.js, Mysql and It is currently active development, with continuous improvements and new feature additions.
- I Developed and integrated the authentication system for secure user access , maintaining dynamic routing for smooth navigation and also Worked on role-based access control (RBAC) to define which users can access specific modules
- I Developed an advanced News and Article Management module with features like content creation, editing, scheduling (auto publish/unpublish), and a dedicated section for election-related news. Integrated support for multiple social media embeds (Twitter, Instagram, Facebook) and a reusable image management system with captions. Enabled rich content handling with image reuse across posts, enhancing editorial workflows and flexibility for news platforms.
- Worked on multiple sections to enhance content management and system efficiency, with ongoing improvements and new feature additions.

Escorts Kubota Limited (Website)

- This project created by using Next js,Typescript, Tailwind, Ant Design, Express.js, Mysql
- I worked in International Business (IB) Section in this project and Implemented a dynamic country management system where products and features are displayed based on the selected country.
- Developed an advanced filtration system that updates product listings in real time based on country selection and Created multiple product categories such as Farmtrac, Powertrac, etc., for better organization and accessibility
- Designed and integrated all pages to enhance the user experience and provide relevant information.

RedFM(Rider Music Festival CMS)

- This project created by using React js, Tailwind, Typescript, Ant Design, node js Express.js, Mysql
- I Designed and managed a comprehensive CMS for handling festival events, artist profiles, schedules , season wish handling. and I Developed responsive UI components with Ant Design, implementing lazy loading and code splitting for enhanced performance.
- I Connected backend APIs to fetch and display real-time artist details, event schedules, and user engagement data and also Integrated dynamic routing and efficient state management to ensure smooth user interactions
- Created a mobile-friendly and intuitive UI, ensuring a seamless experience across devices.

Technical Skills

Frontend: Html, Css and its framework(Bootstrap, tailwind), Javascript, Typescript, React js , Next js
Backend: Node js, Express js
Database: Mongo DB , SQL
Problem solving:Data structure and algorithm
Tools: VS Code, Github, Bitbucket, Hoppscotch, Postman
